Investment Information

Investment Objective & Strategy from investment’s prospectus

The investment seeks long-term capital appreciation and to protect the purchasing power of capital against inflation.

The fund normally invests at least 80% of its assets in equity securities of domestic and foreign companies (including those located in emerging markets) principally engaged in the exploration, mining, or processing of gold and other precious metals and minerals, such as platinum, silver, and diamonds. It is not diversified.

Performance Disclosure: Investing in securities products involves risk, including possible loss of principal. The performance data quoted represents past performance and is no guarantee of future results; current performance may be lower or higher. The return and principal value of an investment will fluctuate, so that an investor’s shares, when redeemed, may be worth more or less than their original cost. For the most recent month-end performance, please go to www.usaa.com. Fund Rank Percentile is based on the total return percentile rank within each Morningstar Category. See Disclosure for details.

Annual Turnover Ratio: 14.00

Notes

The Fund is subject to additional risks, such as currency fluctuation, market liquidity, political instability and increased price volatility. It may be more volatile than a fund that diversifies across many industries and companies. Foreign investing is subject to additional risks, such as currency fluctuations, market illiquidity, and political instability. Emerging market countries are most volatile. Emerging market countries are less diverse and mature than other countries and tend to be politically less stable.
Performance

Total return reflects performance without adjusting for the effects of taxation, but is adjusted to reflect all actual ongoing fund expenses and assumes reinvestment of dividends and capital gains. The fund’s performance is compared to an index. The index is an unmanaged portfolio of specified securities and does not reflect any initial or ongoing expenses. A fund’s portfolio may differ significantly from the securities in the index. Morningstar provides adjusted historical returns and an Extended Performance Rating for some mutual funds in its universe. This means that any share class that doesn’t have a 1, 3-, or 10-year performance history may receive a hypothetical Morningstar Rating based on the oldest surviving share class of the fund. First, Morningstar computes the fund’s new return stream by appending an adjusted return history of the oldest share class. Next, the Extended Performance Rating is determined by comparing the adjusted-historical returns to the current open-end mutual fund universe to identify placement in the bell curve used to assign the Morningstar Rating.

Expenses

Expense ratio represents the total annual operating expenses, as reported in the Fund’s most current prospectus, and is calculated as a percentage of average net assets (ANAs).

Certain funds have management fees that can fluctuate depending upon the fund’s performance relative to a benchmark index. For these funds, the management fees can be raised or lowered by up to +/-0.06%. Any such performance adjustment to the management fee will be applied monthly based upon the 36-month rolling performance of the fund versus the applicable index. Please see the fund’s prospectus for more information.

Best and Worst 3 Month Performance

Morningstar calculates the best and worst 3-month period (in percentage) in-house on a monthly basis.

Best 3-month Period: The highest total return the stock has posted in a consecutive three-month period over the trailing 15 years, or if a fund does not have 15 years of history, it will go back as far as the inception date.

Worst 3-month Period: The lowest total return the stock has posted in a consecutive three-month period over the trailing 15 years, or if a fund does not have 15 years of history, it will go back as far as the inception date.

Growth of $10,000 Graph

This graph shows a fund’s performance based on how $10,000 invested in the fund would have grown over time. The returns used in the graph are not load-adjusted. The growth of $10,000 begins at the date of the fund’s inception, or the first year listed on the graph, whichever is appropriate. Located alongside the fund’s graph line is a line that represents the growth of $10,000 in an index. The inclusion of the index allows investors to compare the performance of the fund with the performance of a benchmark index.

Morningstar Rating™

The Morningstar Rating™ for funds, or “star rating,” is calculated for funds and separate accounts with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product’s monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads or charges. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics.

Morningstar Return

The Morningstar Return rates a fund’s performance relative to other managed products in its Morningstar Category. It is an assessment of the product’s excess return over a risk-free rate (the return of the 90-day Treasury Bill) in comparison with the products in its Morningstar category. In each Morningstar category, the top 10% of products earn a High Morningstar Return (High), the next 22.5% Above Average (+ Avg), the middle 35% Average (Avg), the next 22.5% Below Average (- Avg), and the bottom 10% Low (Low). Morningstar Return is measured for up to three time periods (three, five, and 10 years). These separate measures are then weighted and averaged to produce an overall measure for the product. Products with less than three years of performance history are not rated.

Morningstar Risk

Morningstar Risk evaluates a fund’s downside volatility relative to that of other products in its Morningstar Category. It is an assessment of the variations in monthly returns, with an emphasis on downside variations, in comparison with the products in its Morningstar category. In each Morningstar category, the top 10% of products with the lowest measured risk are described as Low Risk (Low), the next 22.5% Below Average (- Avg), the middle 35% Average (Avg), the next 22.5% Above Average (+ Avg), and the top 10% High (High). Morningstar Risk is measured for up to three time periods (three, five, and 10 years). These separate measures are then weighted and averaged to produce an overall measure for the product. Products with less than three years of performance history are not rated.

Fund Rank Percentile

This is the total return percentile rank within each Morningstar Category. Morningstar ranks investments based on the number of distinct portfolios in a category, rather than giving equal weight to each share class of a fund. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. Historical percentile ranks are based on a snapshot of the funds as they were at the time of the calculation. Percentile ranks within categories are most useful in those groups that have a large number of funds. For small universes, funds will be ranked at the highest percentage possible. For instance, if there are only two specialty-utility funds with 10-year average total returns, Morningstar will assign a percentile rank of 1 to the top-performing fund, and the second fund will earn a percentile rank of 51 (indicating the fund underperformed 50% of the sample).

Morningstar Style Box™

The Morningstar Style Box reveals a fund’s investment style as of the date noted on this report.

For equity funds the vertical axis shows the market capitalization of the long stocks owned and the horizontal axis shows investment style (value, blend, or growth).

For fixed-income funds, the vertical axis shows the credit quality of the long bonds owned and the horizontal axis shows interest rate sensitivity as measured by a bond’s effective duration.

Morningstar seeks credit rating information from fund companies on a periodic basis (e.g., quarterly). In compiling credit rating information Morningstar accepts credit ratings reported by fund companies that have been issued by all Nationally Recognized Statistical Rating Organizations (NRSROs). For a list of all NRSROs, please visit http://www.securityrating.com/nrsro. Additionally, Morningstar accepts foreign credit ratings from widely recognized or registered rating agencies. If two rating organizations/agencies have rated a security, fund companies are to report the lower rating; if three or more organizations/agencies have rated a security, fund companies are to report the median rating, and in cases where there are more than two organization/agency ratings and a median rating does not exist, fund companies are to use the lower of the two middle ratings.
